Heta, beta-carotene 15,15'-dioxygenase protein, nucleic acids and antibodies, useful for production of vitamin A from carotene and gene
  Brugger R, Friedlein AM, Wirtz GM, Woggon W, Wyss A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       be used to transform cells, particularly plant cells, to increase their vitamin A contents (especially in fruits and vegetables) and in gene therapy of subjects who have mutated or deleted forms of the become one thus low vitamin A levels and susceptibility to developmental or ophthalmological disorders. Antibodies raised
                                                                                                                                                                                                                                                                              Beta, beta-carotene-15,15'-dioxygenase (bCDD) is used for enzymatic conversion of beta-carotene to vitamin A and for raising specific antibodies. Nucleotides encoding all or part of bCDD are useful as primers or probes for specific amplification and/or detection of the gene that encodes bCDD, for isolation of related sequences in other organisms, for determining bCDD levels in humans (to identify subjects requiring vitamin A supplementation) and for detecting mutations in the broth quare. The nucleotide encoding book may also

trafficking of leucocytes between tissues and lymphatic vessels or to affect migration in and out of the thymus.
                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   surface protein. Transfection of eukaryotic cells (refractory to
infection with HSV) with a vector containing a nucleic acid
encoding the HSV receptor renders the host cells permissive to HSV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is the nucleotide sequence of B5T74 clone cDNA that codes for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 entry and replication. In the present invention, the combination of a novel porcine cell model system which is refractory to HCV entry, along with specific HSV B5 and/or HVEM (see AAY05797) receptor proteins enables the development of assays for servening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     novel human herpes simplex virus (HSV) receptor B7774 or B5 (see AAV05796), which appears to be a type II membrane-spanning, cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antiviral compounds and therapeutics. The assays are useful for detecting the ability of agents to inhibit HSV entry or spread and provide for facile high-throughput screening of compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the HSV receptor, an immunogenic polypeptide or fragments of the

(LCT1). The present invention also describes a transquaic plant, preferably a member of the genus Brassica, comprising an expression cassette containing a plant promoter operably linked to a herorologous LCT1 polynucleotide. The LCT1 polynucleotide can be used in an expression cassette for modulating heavy metal or albeli metal uptake in a plant. The transgenic plants are useful for removing heavy metals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The PEX gene spans the deleted requion Xp22 lin X linked hypophosphatemic rickets. The gene is mutated in non-deletion patients with the disorder. PEX is a cell membrane associated protein with its active site in the extracellular compartment. The cells with the highest level of PEX expression are the osteoblasts. These cells are also the site of action of circulating parathyroid hormone (PTH). PTH stimulates these cells to produce factors which in turn stimulate other bone cells specifically asteoclasts, to break down bone. Since PEX likely inactivates PTH in contact with osteoclasts and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Monoclonal antibody, 41-2; 50-5; antigen; tumour metastasis; Hop-3 cell; PETA-3; CD151; transmembrane 4 protein superfamily, tetraspania; cancer; angious; homangiona; arthritis; ocular necessoralarization; ds

Parathyroid hormone related poptide (PTHFP) may also serve as a substrate for PEX. PTH and PTHFP levels can be modulated using PEX. This regulates osteoblast activity, and can be used for the treatment and diagnosis of metabolic bone diseases which

50-6 that recognize antigens associated with tumour metastasis. MAD 50-6 was used to isolate its binding antigen. This sequence represents the cloue whose expression product binds the MAD 50 6. The clone was isolated from a Hep-3 cell cDNA expression library screened with MAD 50 6. The ending sequence was shown to have homelogy to the PFIA-yClD3 quene which encodes a member of the transmerance 4 protein superfamily, also known as terraspanins. The antibodies can be used for diamonship and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 metastatic cancers. The antibodies can also be used for treating aberrant.
PETA-3-dependent anglogenesis, e.g. in patients with hemanglomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibodies which recognize antiqens associated with tumor metastasis, used to develop products for the diagnosis and treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a govel monoclonal antibodies (MAD) 41 2 and

The invention relates to methods of identifying ligands for peroxisome proliferator activated receptor gamma (PPARgamma) using differential gene expension and also provided are PPARgamma responsive nucleotide sequences selected from HEPATO:1-18 and 44 our their complements HEPATO are nucleic acid sequences differentially expressed in layer lissues of animals following exposure to N-(2-hemosylphenyl)-L-tyrosine, a synthetic PPARgamma ligand. The methods are useful for identifying a ligand for PPARgamma and a candidate therapeutic agent for a pathophysiology associated with a PPARgamma mediated metabolic pathway, such as noninsulin-dependent diabetes mellitus (NiLDM). The information is also useful for diagnosing or determining susceptibility to a PPARgamma mediated pathophysiology e.g. NIDDM, liver failure, jaundice or ammonia mediated pathophysiology e.g. NIDDM, liver failure, jaundice or ammonia totterfling HEPATO sequences and for amplifying HEPATO sequences. HEPATO sequences and for amplifying HEPATO sequences.
                                                                                      Identifying ligands for peroxisome proliferator activated receptor gamma using differential exp.ession of genes expressed in liver tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0; Gaps

The invention relates to methods of identifying ligands for peroxisome expression. Also provided are perpendicularly administrated activated receptor gamma (Pephgamma) with although definition and so provided are pepagamma responsive nucleotide sequences selected from HEPATO:1-18 and 44 or their complements. HEPATO are nucleic acid sequences differentially expressed in liver fissues of animals following exposure to N.(2-benoylepheny) L.L.Cosine, a synthetic PPAKgamma and a candidate therapeutic agent for a pathophysiology associated with a PPAKgamma enables candidate therapeutic agent for a pathophysiology sociated with a PPAKgamma mediated metabolic pathway, such as noningulin-dependent diabetes mellitus (NIDDM). The invention is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, cytokine, cell preliferation, cell differentiation, gene therapy; vacchie; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                              mediated pathophysiology e.g. NIDDM, liver failure, jaundice or ammonia toxinity HEPATO sequences are useful for constructing probes for detecting HEPATO KNA sequences and for amplifying HEPATO sequences.

The invention relates to human polynucleotides (AAI79541-AAI93841) and the encoded proteins (AAA000010-AA01940) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The production and polymetries are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are vacious cytokine-like activities, v.q. stem cell growth lactor activity, haematopoiesis regulating activity and may be useful in the diagnosis and/or trequiment of vancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         used for detection, diagnosts and druq screening. The protein can also be used to freat inflammation of diseases including viral, bacterial, or fundal infections, allergic responses, mechanical injury associated with trainma, hereditary diseases, lymphosis or earchinga, or other conditions which activate the quies of lymphoid or neutronal tissues it can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Endothelial differentiation gone receptor handlegen human, HFD, EDG 6; detection; diagnosis; drug screening; treatment; inflammation; disease; viral; baccerial; fungal infection; allergic response; injury; hereditary disease, lymphoma, carelinoma, lymphoid; neutonal; cascade; lymphocyte traffickling; leukscyte traffickling; leukscyte traffickling; leukscyte traffickling; signal transduction, rheumatoid synovium; autoimmune disorder; ss.

used for treating problems involving excessive lymphocyte and leukocyte trafficking. Inhibitors of HEDS are useful for controlling signal transduction and signalling cascades in reals of the theomatoid synovium. The protein can also be used for treating autoimmune disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a gene fragment of Mycobacterium tuherculosis Cupper, line Superoxide dismutase, Cu., Luscub, Superoxide dismutase catalyses the conversion of superoxide radicals, which are mutaquite, into molecular oxyqun and hydroqun pertoxide. Cu. Lasob is thought to be important for bacterial survival in macrophages. Macrophages equal bacteria, and set about destroying them by generating superoxide radicals. The bacterium counterests by releasing sub-roxide radicals. The present seaguence is added to the truncated of Lasoft coding sequence, (AAAAAAAA) to produce a lile-length version.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           infection in animals, and for detecting the presence of Mycobacterium tubercolosis. The antibodies are also used to isolate the Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence was then added downstream of the Lys codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibodies can be developed which bind specifically to the full length protein. The antibodies are useful for detecting tuberculosis

The lactic acid bacterium shuttle vector can be used as a DNA vacchne carrier, in selecting transformed cells, drugs and foods. The present sequence is that of a multiple cloning site of one of the LAB shuttle vectors of the invention.
                                                                                                                                                                                                                                                                                                                                                                       comprises a nucleic ucid sequence encoding a protein related to replication of the LAB plasmid and a non-antibiotic-resistant selective
                                                                                                                                                                                                                                                                                                                                                            A lactic acid bacterium shuttle vector useful as a DNA vaccine carrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  replication and a nucleic acid sequence encoding a protein related to
                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a lactic acid bacterium (LAR) shuttle vector
